

Name

Class

There are some very long rivers in the world. Here are some of them.

Yangtze 6378 km

(_____)

Nile 6693 km

(_____)

Irtysch 5410 km

(_____)

Congo 4373 km

(_____)

Huang He 5463 km

(_____)

Lena 4399 km

(_____)

Amazon 6436 km

(_____)

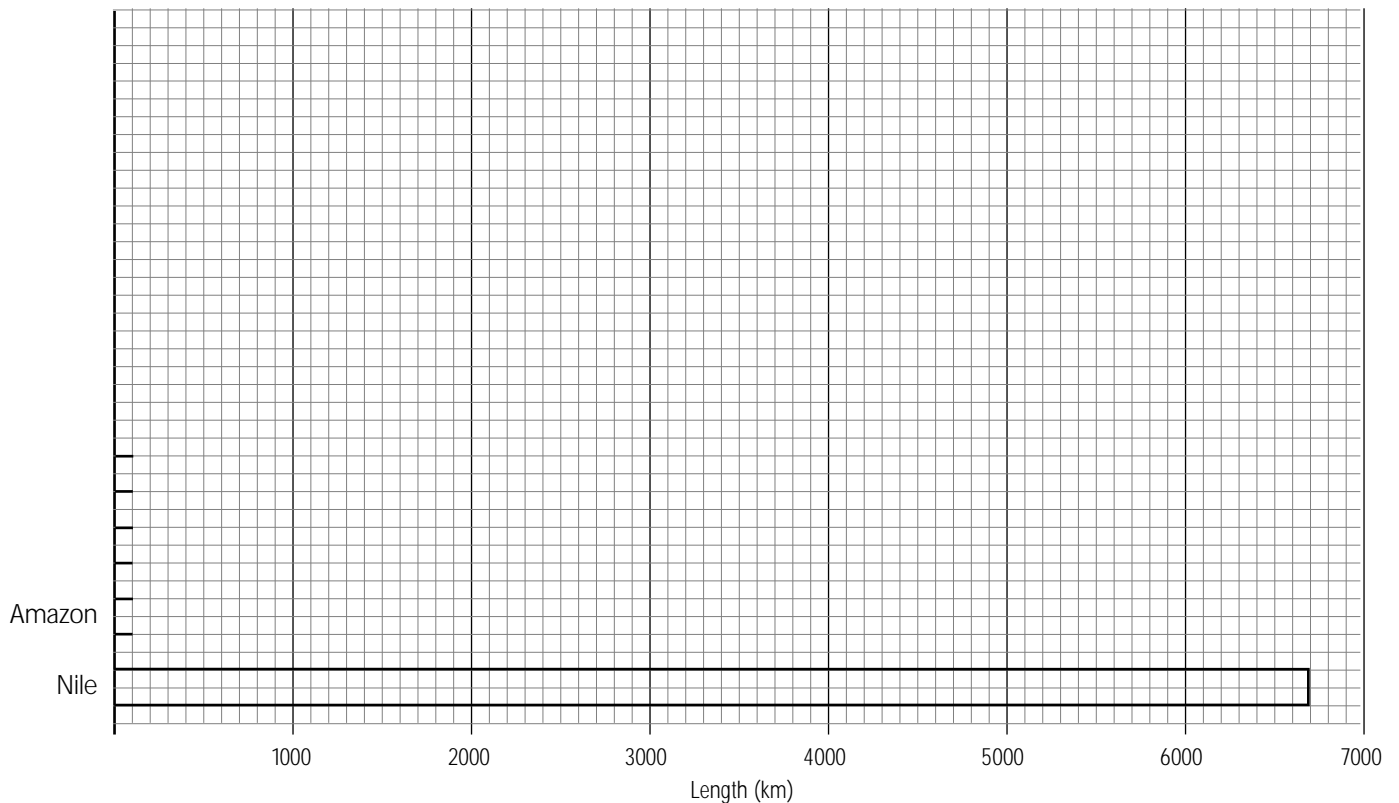

Mekong 4183 km

(_____)

Mackenzie 4241 km

(_____)

- 1 First, find each river in an atlas. Write its country in the brackets under its name.
- 2 Now, complete the bar graph started below.
 - Start by listing the rivers in order of length, the longest one first.
 - Write their names in order up the side. (This has been started for you)
 - Draw a bar for each river, using a pencil and ruler. (The Nile has been done for you!)
 - Colour in your graph. (A different colour for each bar if you like.)
 - Add a title.

- 3 Now find out which is the longest river in Britain. It is: _____ .
- 4 How long is it? _____ Show it on your graph.
- 5 In your exercise book, suggest reasons why British rivers are fairly small.
